SUMMARY

Digital Science and Technology graduate from Mahidol University. Designed relational databases in university projects - ER/EER modelling, schema design, data dictionaries and MySQL DDL and co-designed the PostgreSQL (Supabase) schema behind a production cattle-management application. Also worked with a public e-commerce dataset in Alteryx and Power BI. Available to relocate to Bangkok and to work rotating shifts, including night shifts.

SKILLS

- **Databases:** SQL, MySQL, PostgreSQL (Supabase), Firebase
- **Database Skills:** ER/EER modelling (Chen and Crow's Foot), relational schema design, data dictionaries, DDL, foreign key constraints, join and aggregate queries
- **Data & BI:** Alteryx, Power BI
- **Tools:** Git, GitHub, Postman
- **Other Technical:** Python, Java, JavaScript, TypeScript, Node.js, REST APIs, React, Next.js, Flutter, Appium, Selenium

PROJECTS

Thai Cattle Passport Application

Sep 2025 - May 2026

Senior project, production application

- Co-designed the PostgreSQL (Supabase) schema covering farms, cattle, health logs and ownership transfers.
- Defined the tables and relationships that keep each animal's health and ownership records linked across transfers.
- Built the application layer over the schema in Flutter and exposed selected health data through public QR-code links.

E-commerce Data Analysis

2024

University project, business data analytics course

- Worked with the public Brazilian e-commerce dataset from Kaggle: six related tables totalling 1.4 million rows.
- Built five Alteryx workflows that filter, group and aggregate 99,440 orders into 13 reporting extracts.
- Modelled those extracts into a four-page Power BI dashboard covering regional sales, underperforming states and payment behavior.

Retail Database Design

2023

University project, database design course

- Modelled a retail chain in ER/EER using both Chen and Crow's Foot notation, then mapped the model to a relational schema.
- Implemented the schema in MySQL: 13 tables, 14 foreign key constraints, seed data, and join and aggregate queries.
- Owned the Customer and Account Member entities end to end, including the data dictionary and DDL.

WORK EXPERIENCE

Frontend Developer Intern

Jun 2025 - Nov 2025

Ministry of Public Health

- Built 22 production screens in React, Next.js and Tailwind CSS for an internal asset-management system used by ministry staff.
- Implemented CRUD forms, search, filtering and pagination over asset records across registration, borrowing, repair, inspection and disposal workflows.

Test Automation Intern

May 2024 - Jul 2024

Celestica (Thailand) Limited

- Wrote the test plan and designed functional test cases for an Android Bluetooth motor-control application.
- Ran the suite across Android emulators and physical devices, then reported every run through Extent Reports with a per-test pass/fail breakdown for the development team.
- Automated the full suite in Java with Appium.

EDUCATION

Bachelor of Science in Digital Science and Technology

Graduated: Jun 2026

Faculty of Information and Communication Technology, Mahidol University | **GPAX:** 2.70

LANGUAGES

Thai: Native | **English:** Intermediate (TOEIC 660, B1)
