SUMMARY

Digital Science and Technology graduate (class of 2026). Built React and Next.js screens on a team's NestJS REST API during an internship at the Ministry of Public Health, took part in two rounds of UAT and fixed the issues raised, and worked on the back end in projects: a Node.js and Express REST API with MySQL, and PostgreSQL row-level security and RPCs on Supabase. Also wrote the test plan and automated the test suite in Java with Appium for an Android app at Celestica.

WORK EXPERIENCE

Frontend Developer Intern **Jun 2025 - Nov 2025**
Ministry of Public Health

- Contributed to 22 screens (primary author of 14) from Figma designs in React, Next.js and Tailwind CSS for an asset-management system replacing Excel-based tracking.
- Owned a five-step asset registration wizard, plus borrowing, repair, inspection, disposal and reporting screens.
- Connected the registration, repair, disposal and request-report screens to the team's NestJS REST API, and implemented search, filtering, pagination and modal CRUD forms.
- Took part in two rounds of UAT and fixed the issues raised; the system was about 90% complete by the end of the internship.

Test Automation Intern **May 2024 - Jul 2024**
Celestica (Thailand) Limited

- Wrote the test plan and functional test cases for an Android Bluetooth motor-control app, and automated the full suite in Java with Appium on Android emulators and physical devices.
- Reported each run through Extent Reports, giving the team a per-test pass/fail breakdown.

PROJECTS

Trading ERP Web Application **Jun 2026 - Present**
Personal project, in progress

- Building a web-based ERP in React 19 and TypeScript, covering the RFQ → quotation → purchase order → invoice → payment workflow.
- Designed multi-tenant PostgreSQL row-level security tied to Supabase Auth users, and transactional RPCs with server-computed VAT totals and over-receiving prevention.
- Built forms with React Hook Form and Zod, and managed server state with TanStack Query.

Thai Cattle Passport Application **Sep 2025 - May 2026**
Senior project (3 members)

- Built a cattle management app in Flutter and Riverpod, with 25+ screens for farm registration with Google Maps, cattle onboarding, health logging and an ownership-transfer marketplace.
- Co-designed an 8-table PostgreSQL schema with a self-referencing sire/dam link for pedigree tracking and hashed national IDs for identity verification.
- Integrated a ConvNeXt-Tiny model over REST for cattle identification, and added QR-code cattle profiles on a public web page.

Game Store Website **2023**
ITDS241 Web Technologies and Applications, group project (3 members)

- Built an Express REST API (GET/POST/PUT/DELETE) to list, create, update and delete products and admin accounts in MySQL, using parameterized queries.
- Designed the MySQL schema and built the storefront and admin pages in HTML, CSS and JavaScript; all three members worked across front end, back end and database.

SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, SQL, Dart, HTML, CSS
- **Frontend:** React, Next.js, Tailwind CSS, React Hook Form, Zod, TanStack Query, Flutter, Riverpod
- **Backend:** Node.js, Express, REST APIs
- **Databases:** PostgreSQL (Supabase), MySQL, Firebase Cloud Firestore
- **Testing:** Selenium, Appium, Katalon Studio
- **Tools:** Git, GitHub, Vite, Figma, Postman

EDUCATION

Bachelor of Science in Digital Science and Technology **Graduated: Jun 2026**
Faculty of Information and Communication Technology, Mahidol University | **GPAX:** 2.70

LANGUAGES

Thai: Native | **English:** Intermediate (TOEIC 660, B1)
